Fault-Tolerant Control of Current Measurement Circuits for Three-Phase Grid-Connected Inverters. *Journal of Dynamics, Monitoring and Diagnostics*, Volume 4, Issue 4, pages 308-317 (2025).

First published online: 4 December 2025.

DOI: <https://doi.org/10.37965/jdmd.2025.863>

The Editor-in-Chief and the Editorial Office of the *Journal of Dynamics, Monitoring and Diagnostics (JDMD)* hereby retract the above-mentioned article.

Following publication, the corresponding author contacted the journal and requested the retraction of the article. The authors informed the Editorial Office that the manuscript published in the journal was **an incorrect internal**

working draft, which contained **preliminary test data used during the software validation stage rather than the final original research results**.

As a consequence, the authors have confirmed that the **findings and conclusions presented in the article are unreliable**. In order to maintain the accuracy and integrity of the scholarly record, the journal has therefore decided to retract this article.

This retraction has been **requested by the authors and approved by the Editor-in-Chief and the Editorial Board of JDMD**.

The original article will remain available on the journal website in order to preserve the scholarly record, but it will be clearly marked as **“Retracted.”**
